

SERVICE MANUAL

PORTABLE CASSETTE RECORDER

DR101
EUROPE

142 344 11

SPECIFICATIONS

Power Source		Torque	
AC	220V (50Hz)	Playback	30 ~ 55g-cm
DC	6V (Babyzelle, R 14 x 4)	Fast Forward	More than 55g-cm
Output Power	550mW (Max.)	Rewind	More than 55g-cm
Power Consumption	5W	Frequency Response	
Current Consumption (at Vol. Min.)		(Overall, Normal mode)	250Hz ~ 6,300Hz
Record mode (with Metal)	160mA	Erase Ratio (Overall)	More than 40dB
Playback mode	160mA	Signal to Noise Ratio	More than 32dB
Fast Forward mode	170mA	Crosstalk	
Rewind mode	170mA	Track to Track	More than 50dB
Recording System		Harmonic Distortion	Less than 10%
Erasing System		Hum & Noise (at Vol. Min.)	-53dBs
Tape Speed		Terminal Impedance	
Wow & Flutter		MIC.	4.7k Ω
Fast Forward Time		Earphone	6 Ω
Rewind Time		Dimensions	142.5(W) x 50.5(H) x 269(D)mm
		Weight	930g

—Specifications subject to change without notice.—

WM-10133

NOTE:

The above mentioned specifications are mainly based on the IHF measurements standard. They can therefore not directly be compared with specifications based on the DIN standard or other standards.

127

DISASSEMBLY INSTRUCTIONS

GENERAL REMARKS

- Before disassembling the unit, spread a soft rubber mat or a cloth on the work bench to avoid scratches and grease stains.
- Do not spread anything which is likely to cause static electricity because transistors and ICs may be easily damaged by it.
- Reassemble the unit, noting the kinds of screws and the soldering and arrangement of the leads. Refer to "Circuit Diagram and Exploded Views" for correct assembly.
- Before disassembling the unit, take out the cassette tape and the batteries.

CABINET BOTTOM REMOVAL

1. Detach the battery compartment lid and remove the four screws (1 ~ 4) fastening the Cabinet Bottom.
2. Detach the Cabinet Bottom by lifting it in the direction of the arrow and the Handle can be removed.
3. Reassemble in reverse order.

MECHANISM CHASSIS REMOVAL

1. Detach the Cabinet Bottom by following the instructions for it.
2. Unsolder the following leads from the Amplifier P.C.Board.
 - Two leads (red and black) of the built-in microphone
 - Two leads (pink and sky-blue) of the Speaker
 - Three leads (blue, red and black) of the Record/Battery Indicator
3. Remove the screw (5) and detach the Mechanism Chassis together with the P.C.Board by lifting it from the Cabinet Top.

4. Reassemble in reverse order.

AMPLIFIER P.C.BOARD REMOVAL

1. Detach the Cabinet Bottom by following the instructions for it.
2. Unsolder the following leads from the Amplifier P.C.Board.
 - Three leads (blue, red and black) of the Record/Battery Indicator
 - Two leads (red and black) of the Motor
 - White lead for the ground
3. Detach the Amplifier P.C.Board by lifting it in the direction of the arrow.

4. Reassemble in reverse order.

ADJUSTMENT PROCEDURES

GENERAL REMARKS

- Before the adjustments, wipe off stains on the tape contacting surfaces of the parts, the belt and pinch roller with a soft cloth soaked in alcohol. Trouble may occur because of oil and grease stains.
- Carefully handle the belt because grease easily attaches to it.
- Check the rubber-used parts, If the rubber has quality deterioration or scratch marks, replace the part with a new one.

EQUIPMENT REQUIRED

- VTVM
- Frequency Counter
- Dummy Load (6Ω)
- DC Constant-voltage Regulator
- Test Tapes
 - * 3kHz Test Tape (Example: TEAC MTT-111) for Tape Speed Adjustment
 - * 8kHz Test Tape (Example: TEAC MTT-113C) for Head Azimuth Adjustment
- Alignment Tool

NOTE:

1. When adjusting supply 6.0V DC from the constant-voltage regulator to the Ext. Power Jack.
2. Before performing the adjustment, set the controls and switches as follows:
 - * Mode Switch NORMAL
 - * Phase Control Switch NORMAL

TAPE SPEED ADJUSTMENT

1. Connect a frequency counter to the earphone jack as illustrated and insert a 3kHz test tape (Example: TEAC MTT-111) into the cassette compartment.

2. While playing back the test tape, adjust the potentiometer P1 by turning it through the adjusting hole of the Cabinet Bottom with an alignment tool until the counter reads 3kHz.

Potentiometer (P1) for Tape Speed Adjustment

HEAD AZIMUTH ADJUSTMENT

1. Connect a VTVM to the earphone jack as illustrated and insert a 8kHz test tape (Example: TEAC MTT-113C) into the cassette compartment.

2. While playing back the test tape, turn the azimuth adjusting screw until the VTVM reads the maximum.

3. After the adjustment, secure the adjusting screw with paint or glue.

NOTES:

- Parts order must contain Model Number, Part Number and Description.
- Ordering quantity of screws and resistors must be multiple of 10 pcs.

PRODUCT SAFETY NOTICE

Each precaution in this manual should be followed during servicing. Components identified with the IEC symbol △ in the parts list and the schematic diagram designate components in which safety can be of special significance. When replacing a component identified with △, use only the replacement parts designated, or parts with the same ratings of resistance, wattage or voltage that are designated in the parts list in this manual. Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.

R3	RD4 7 2251 JN000	Carbon 4.7k Ω 1/4W \pm 5%	1				
R4	RD2 2 2251 JN000	Carbon 2.2k Ω 1/4W \pm 5%	1				
R5	RD1 5 3251 JN000	Carbon 15k Ω 1/4W \pm 5%	1				
R6	RD3 9 3251 JN000	Carbon 39k Ω 1/4W \pm 5%	1				
R7	RD4 7 3251 JN000	Carbon 47k Ω 1/4W \pm 5%	1				
R8	RD1 0 5251 JN000	Carbon 1M Ω 1/4W \pm 5%	1				
R9	RD4 7 0251 JN000	Carbon 47 Ω 1/4W \pm 5%	1				
R10	RD1 8 2251 JS000	Carbon 1.8k Ω 1/4W \pm 5%	1				

NOTES:

- Parts order must contain Model Number, Part Number and Description.
- Ordering quantity of screws and resistors must be multiple of 10 pcs.

PRODUCT SAFETY NOTICE

Each precaution in this manual should be followed during servicing. Components identified with the IEC symbol  in the parts list and the schematic diagram designate components in which safety can be of special significance. When replacing a component identified with , use only the replacement parts designated, or parts with the same ratings of resistance, wattage or voltage that are designated in the parts list in this manual. Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.
